

Hi everyone,

I revised the second exercise on the homework. Please make sure you are working with the revised version rather than the version that I uploaded to Moodle earlier. The second exercise should have read "pre-order" dfs. That is the version of the dfs algorithm that we did in class. I also had "depth-first-search" rather than "breadth-first-search" in one of the sub-exercises in effect asking to do the problem the same way twice. That was a bad copy and paste job.

Again, I extended the due time to Thursday to give everyone enough time to do the homework. It is not a lengthy exercise. If you need any further clarification, send me an email. I will check my email today, on Monday and on Tuesday. My response may be delayed since I might check my email only once a day.

Best,
