

## Steps for Downloading VPN on Your Home Computer

- 1) Go to this web page: <https://grok.lsu.edu/Article.aspx?articleid=20097>
- 2) In the **myLSU Single Sign On screen** that comes up, log in with your **myLSU User name** (not your myLSU email address, just your myLSU User name) **and Password**.
- 3) When the page that says: **GlobalProtect VPN: Overview & How to Download** comes up, click on the link <https://gp.vpn.lsu.edu> near the top of the page.
- 4) On the next page, under **GlobalProtect Portal**, log in with your **myLSU User name and Password**
- 5) Under **GlobalProtect Portal** on the next page, **click on the download line for your computer's operating system** (Windows 32 bit, Windows 64 bit, or Mac 32/64 bit). If you have Windows, then for many of you, your operating system will be Windows 64 bit, so you can try that one first. Then click on **Run** in the box at the bottom of the screen.
- 6) A window will come up that says: **Do you want to run this file?**  
Click on **Run**. Then click on **Run** again.
- 7) In the next window that comes up, click on **Next >**
- 8) In the next window that comes up, click on **Next >**
- 9) In the next window that comes up, click on **Next >**
- 10) A window will come up that says:  
**Do you want to allow this app to make changes to your device?**  
Click on **Yes**
- 11) Do not click on Close at the bottom of the Installation Complete window.  
Instead, go to the window that says: **Welcome to GlobalProtect** (you may have to wait a few seconds for this window to come up) and enter [gp.vpn.lsu.edu](https://gp.vpn.lsu.edu) in the box for your portal address, then click on **Connect**
- 12) In the **Sign In** box that comes up, enter your **myLSU User name and Password** and click on **Sign In**
- 13) Then a box will come up that says **Connected** . The VPN icon should now be in the bar at the bottom of the screen.
- 14) **NOTE: Now that VPN has been installed, you can use WinSCP to submit your lab programs.**
