333

1 ✓

if ($n < 1$)
return 0; } \Rightarrow To handle $n \leq 0$.

C (a) double sum = 0;

for (int i = 1; i \leq n; i++) ✓

{

sum += (1/i); ✓

}

return sum; ✓

1/i

1.1

C (b) System.out.print (harmonicSeries(50)); ✓

D(c) 5 iterations ✓

output:

3 8 13 18 23 ✓

D(c) blank on line 1: $i < 32$ ✓

blank on line 3: $i-4$ ✓

5 iterations ✓

{ correct, but $i \leq 27$ or $i \leq 28$ }
is the tight bound, else,
 $i < 29, i \leq 30 \dots i < 32$ are all
correct

10 0 6

D(d) The code segment in listing 4 is more efficient because although it has the same number of comparisons and add/subtract-type operations, it uses 5 less multiply/divide/modulus-type operations, and is thus more overall efficient
